Srinidhi Skanda V

AI Engineer | Gen AI | Agentic AI

Portfolio: huggingface.com
GitHub: github.com/sriniskanda
LinkedIn: [srinidhi-skanda-v-a6b98073](https://www.linkedin.com/in/srinidhi-skanda-v-a6b98073)

AI Engineer with 7+ years of experience designing and delivering AI, NLP, and intelligent automation solutions across enterprise environments. Specialized in Generative AI, Retrieval-Augmented Generation (RAG), LLM orchestration, and production-oriented AI workflows.

Experienced in building AI-powered systems including document intelligence, automated test generation, log analysis, and NLP-driven automation. Led development of RAG-based applications and integrated ML capabilities into scalable engineering pipelines.

Recently focused on advancing expertise in Agentic AI, LangGraph, and LangChain through applied learning and hands-on implementation. Interested in building production-grade AI systems that combine LLMs, orchestration frameworks, and business impact.

TECHNICAL SKILLS & FRAMEWORKS

Agentic & Orchestration	Stateful Multi-Agent Frameworks, LangGraph, LangChain, Autonomous Workflows
Core GenAI & RAG	Production-Grade RAG Pipelines, Context Optimization, Vector Database Semantics, LLM Fine-Tuning
NLP & Deep Learning	Advanced Text Analytics, Document Mining, Classification, CNN/RNN-LSTM Models
Engineering & DevOps	Python APIs, ML Pipeline Integration, Automated Testing, CI/CD Workflows.

TECHNICAL EXPERIENCE

ROLE / Independent AI Engineering Upskilling & Applied Projects

Jan 2026 — Present

Independent

Mysuru Area, KA

- Completed **Agentic AI Specialization (DeepLearning.AI, Andrew Ng)**, focused on agent design patterns, orchestration, memory, tool use, and multi-step reasoning (May 2026) [link](#).
- Completed **LangChain for LLM Application Development (DeepLearning.AI)**, building LLM applications using chains, retrieval, agents, and evaluation techniques (June 2026) [link](#).
- Completed **AI Agents in LangGraph (DeepLearning.AI)**, Build an agent from scratch, and understand the division of tasks between the LLM and the code around the LLM (July 2026) [link](#).
- Mastered architectural patterns for autonomous systems, focusing on multi-agent orchestration, state management, and tool-calling interfaces.
- Built production-grade prototypes leveraging reflection loops and self-correction mechanisms to minimize model hallucinations.
- Designed RAG based Resume Parsing Agent (GitHub) which helps recruiter to quickly analyze and evaluate candidate fit for the role. agent built using Langchain, Ollama and Vector DB. Github -> [link](#)

ROLE / Lead Engineer

Oct 2021 — Dec 2025

HCL Technologies

Bengaluru Area, KA

- Led the development of an automated test-case generator using a RAG pipeline to retrieve context from technical requirement documents, ensuring that generated scripts were grounded in business logic and 95% accurate to specifications.
- Architected a RAG-based log analysis assistant that retrieved historical defect data and system documentation to provide real-time troubleshooting suggestions for server/storage failures.
- Modernized QA infrastructure by integrating ML pipelines into CI/CD workflows, improving the scalability and reliability of automated testing for enterprise-level projects.
- Awarded the HCLTech Spot Award (July 2023) for exceptional innovation in client delivery and performance excellence in automation.

ROLE / Product Development Engineer

Feb 2020 — Oct 2021

UST Global

Bengaluru Area, KA

- Automated manual testing frameworks using Python APIs, cutting execution time by 25%.
- Built NLP models (CNN, RNN-LSTM, word embeddings) for test case automation, bug prediction, and log analysis.
- Applied ML/NLP techniques for debugging and log analysis, improving defect detection.
- Collaborated with cross-functional teams to integrate automation into existing QA processes, reducing cycle time.

ROLE / AI Research Intern

May 2019 — Dec 2019

Arnekt

Pune/Pimpri-Chinchwad Area, MH

- Worked on projects related to NLP and Computer Vision like Conversational Chatbot, Resume Mining, Digital Attendance System [Face Recognition and Detection].
- Worked on Text Mining algorithms like Word Embedding, Document Similarity, Named Entity Recognition, LSTM, CNN and RNN.
- Gained hands-on experience related to conversational ChatBot techniques like NLU, NER, Intent Classification, Dialogue Manager.

- Developed invoice processing automation using NLP, achieving 90%+ accuracy in field extraction.
- Implemented document classification and text summarization models, streamlining invoice workflows for enterprise clients.
- Contributed to scalable text analytics solutions, reducing manual processing effort by 40%.

EDUCATION

M.Tech in Computer Science, Amrita Vishwa Vidyapeetham, Coimbatore, TN	Sep 2015 — May 2017
M.Sc in Computer Science, Amrita Vishwa Vidyapeetham, Mysuru, KA	Aug 2013 — June 2015

CERTIFICATIONS

AI Agents in LangGraph LangChain, Tavily DeepLearning.AI link	July 2026
LangChain for LLM Application Development Harrison Chase, Andrew Ng DeepLearning.AI link	Jun 2026
Agentic AI Specialization Andrew Ng DeepLearning.AI link	May 2026
LangChain Fundamentals - Analytics Vidhya Analytics Vidhya link	Jan 2026
NVIDIA AI Pioneer Program - 2025 NVIDIA link	Dec 2025
NVIDIA AI Technical Curriculum (2025) NVIDIA link	Sep 2025

PORTFOLIO PROJECT

Built from scratch Resume parsing agent using Langchain, Ollama and Chroma vector DB link	June 2026
Hugging Face - Q&A model with Squad Fine-tuning link	Dec 2025
